e-MAR and Care Plans

Stocks Hall Nursing and Care Home Group

Challenges

With more than thirty years of experience and an estate of six nursing and care homes, Stocks Hall is a family run group passionate about delivering excellent person centred care.

They were keen to move away from paper-based care records to improve efficiency, free up more time for care and to deliver visibility across the group. Previous electronic systems had failed to integrate their records in one place or keep up with developments in care.

'We are passionate about delivering excellent, person centred care and the MED e-care solutions actually help my teams better care for our residents. They are integrated, visual, easy to manage and we are able to work with the MED e-care team to rapidly implement changes to the system that meet our own specific needs.'

Sam Potter, Operations Manager

Solutions

The Stocks Hall team started using MED e-care's eMAR solution in early 2018 and rolled it out across the six strong group.

The **e-Mar solution** provides a complete medication administration solution giving confidence that you can deliver the best person centred care possible while complying with CQC /other regulators guidance. Working with the MED e-care team suggestions for bespoke adaptations to the solution were received from people at all levels in the group and rapidly implemented.

Convinced by the strong performance of eMAR and its ability to adapt to their needs, the Stocks Hall team expanded their system with MED e-cares' **Care Plan Solution** in late 2018, seamlessly integrating their records and measurably improving care. MED e-cares' care solutions provide an easy to use, integrated system, which allows you to record care in your own way, whilst ensuring that you can evidence high-quality person-centred care and that your records are compliant with CQC / other regulators requirements.

Results

Within a very short time-frame the results at Stocks Hall have been very positive. Recording has become far more efficient at the point of care, freeing up valuable time to spend with residents while visibility of and sophistication of your Care KPI's is made easy via simple dashboards.

Sam has been delighted to recommend MED e-cares' solutions to other care home groups and pharmacies.
